

Extraordinary People

... personalized care

Mike is part of a team that ensures the healthcare providers at Yampa Valley Medical Center have timely access to reliable electronic medical information.

Whether installing monitors for digital imaging in the operating room or teaching employee computer classes, Mike is proud of YVMC's commitment to technology. More than 80 servers, 400 PCs and countless applications and interfaces must function smoothly to support electronic medical records and connectivity to physician offices.

Mike says, "We're always adding cool technology. I enjoy going around the hospital to make sure the people who are providing health care to our community have the technological tools they need to do their jobs."
